Acknowledgement

The research was completed with the help of many people. They supported me in many different ways with advice and guidance to accomplish the research dissertation. I would like to express my gratitude to all those who supported me.

First and foremost, I wish to express my gratitude to my supervisor Dr. Ajith A. Pasqual, Senior Lecturer, Department of Electronic and Telecommunication Engineering, University of Moratuwa, for his assistance and guidance throughout this study. Dr. Pasqual played a remarkable role in making this research a success.

My thanks are also due to the staff of Department of Computer Science and Engineering and Management of Technology of University of Moratuwa for the valuable assistance given.

I am greatly indebted to my wife for her endless patience and encouragement given throughout my study.

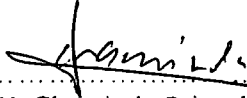

I would like to thank all those who kindly responded to the questionnaires relating to this research.

Abstract

SchoolNet is a network connecting secondary schools in Sri Lanka, which has been setup to support effective use of information and communication technologies (ICT), particularly the Internet, for enhancing primary and secondary school education, and for encouraging greater communication and co-operation among school communities. In school learning environment, teachers play a central role and the objective of this research is to assess whether SchoolNet has made a positive impact to enhance this role. The evaluation of impact of SchoolNet on teachers and the strategies they employ to facilitate the environment is critical.

The research made use of a questionnaire to identify areas where SchoolNet could have made a difference and includes an in-depth analysis of the level of significance of such impact. The analysis shows few relationships that need to be highlighted as improvements in the areas could lead to a more efficient and effective use of SchoolNet for teaching/learning activities.

Number of hypotheses which lead to the development of the questionnaire was evaluated based on the collected data. These evaluations, detailed analysis of the results as well as a set of recommendations are presented in this thesis. Three of the relationships that came into light are highlighted due to their significance: The medium of information used in SchoolNet, SchoolNet utilization in provinces, the use of SchoolNet based on gender of teacher.

There is an identifiable relationship between the use of the SchoolNet and medium/media used in it. All three languages (i.e. Sinhala, Tamil and English) should be used for the contents of the SchoolNet while localizing the operating environment of the SchoolNet. This indicates the importance of local language use in ICT. The teachers who have undergone ICT training use the SchoolNet more than the others, indicating the need for well structured training programs.

Even though the study provided greater insights into the ways SchoolNet is currently being used in Teaching/Learning activities in Schools, it should be noted that the sample size does not permit to generalize conclusions. A detailed survey, which takes into account provincial aspects, needs to be undertaken as a continuation of this work.
