Dissertation submitted in partial fulfillment of the requirements of the degree of  
Master of Science in Business Statistics

Department of Mathematics

Faculty of Engineering

University of Moratuwa

Sri Lanka

May 2015

## DECLARATION

Hereby I state and declare that this project report is the product of my own and is based on a research that I conducted independently without the participation of any other person or authority. The references made to other research in here have been acknowledged appropriately and with appreciation. The source of data and information external to the dissertation and the research has been acknowledged appropriately. In form or substance this research has never been submitted for any other degree, anywhere else. I hereby give my consent to making this available by photocopy for inter-library loans, and for the title and summary of the dissertation to be made available for use by other institution of learning.

Signature:

Date: 27 May 2015.

The above candidate has carried out research for the Master thesis under my supervision.

Signature of the supervisor:

## ACKNOWLEDGEMENTS

Preparing a thesis/ dissertation as a course requirement on master of business statistics is a great opportunity for me to improve my knowledge and understanding about data analyzing on research and improves capabilities as a statistical officer to representations the data relating to surveys in a professional manner.

Firstly I would like to express my sincere gratitude to my supervisor, Prof.T.S.G.Peiris, Professor in Applied Statistics, Department of Mathematics, faculty of engineering, University of Moratuwa, whose recondite knowledge and instructing skills in categorical data analysis helped me to understand and develop the methodology guidance and support steered my study into the right direction. Secondly I would like to acknowledge the invaluable contribution to the teachers of Department Of Mathematics in the University of Moratuwa, and administrative staff, who's provided hospitable attention to queries and enquiries.

My gratefulness is further extended to the Director General of Census and Statistics Department, Mr.D.C.A.Gunawardhana whose visionary leadership granted me the necessary financial assistance, and permission for the necessary data of Sri Lanka Quarterly Labour Force survey for this study. I would also like to thank staff of Census and Statistics Department, mainly Mr.H.W.M.Jayaweera and Ms. ChandaniWijebandara for availing the data as well as providing the necessary clarifications and invaluable comments.

I thank my beloved mother and father for their moral support and appreciation gave to my start this study as well as educational developments since childhood. I am grateful to my family my husband, son and two daughters for bearing lot of difficulties and their endless support during this whole work.I gratefully acknowledge my colleagues around me for their help on different stages of this work.

## ABSTRACT

This study is attempt to identify the factors that influence female labour force participation (FLFP) in Sri Lanka using explanatory variables as age group, marital status, relationship to household head, religion, level of education, sector, province, number of dependants, literacy in English, currently attending to an educational institute in Sri Lanka and compare this results that for male labour force participation (MLFP). The necessary data was obtained from Sri Lanka Quarterly Labour Force Survey 2012 (QLFS 2012) conducted by the Department of Census and Statistics (DCS). Full of The original data set is used for this study consists with 62,299 person records in the data file. The statistical analyses used were bi- variant Chi-square test and binary logistic models. It was found that FLFP is significantly lower than that of MLFP. Low levels of labour force participation was mainly among females who currently engage in studies, who have low levels of education, who are illiterate in English, who have more household responsibilities, place of residence is urban or not in the Western province and who are Muslims. The study recommends that improving human capital, expanding more opportunities for female and providing facilities to working female such as reliable welfare centers for their dependants will support to increase female labour force participation in the country. In literature there are lots of micro level studies on related subjects which were done in other countries but found very few for Sri Lanka. Therefore, findings of this study will be very useful to see the female labour force conditions in the country. The results of this study confirm some previous findings and thus the results can be effectively used for various levels of planning.

Keywords: Binary Logistic Regression, Chi-Square Test, Labour Force Participation Rate, Omnibus Tests

## TABLE OF CONTENTS

	Page No.
Declaration	i
Acknowledgements	ii
Abstract	iii
Table of contents	iv
List of figures	vii
List of tables	viii

### CHAPTER 1

	Page No.
Introduction	
1.1 Background	1
1.2 Labour Force in Sri Lanka	2
1.3 Female Labour Force in Sri Lanka	4
1.4 Unemployment Rate in Sri Lanka	6
1.5 Distribution of Employment Status by Gender	7
1.6 Female Employee in Government and Privet Sector	8
1.7 Female Employment Occupation in Sri Lanka	9
1.8 Significance of the Study	11
1.9 Objectives of the Study	12
1.10 Outline of the Report	12

## **CHAPTER 2**

	Page No.
Literature Review	
2.1 Introduction	13
2.2 Literature Review in Sri Lanka	13
2.3 Literature Review in Other Countries	14
2.4 Summary	18

## **CHAPTER 3**

Material and Methods	
3.1 Data Source	
3.1.1 Background of the data	19
3.1.2 Sampling methodology of the QLFS	19
3.2 Concept and Definitions	20
3.3 Data Used for the Study	23
3.4 Variables Used for the Analysis	23
3.5 Statistical Methods Used	
3.5.1 Pearson's Chi-Square Test	26
3.5.2 Logistic regression analysis	28
3.5.2.1 Binary logistic regression	29

## **CHAPTER 4**

Analysis of Each Variables Influence on Female Labour Force	
4.1 Descriptive Results	34
4.2 Results of the Chi- Square Test	
4.2.1 Influence of age group for labour force participation	35
4.2.2 Influence of marital status for labour force participation	36
4.2.3 Influence of relationship to household head forlabour force participation	37

4.2.4	Influence of ethnicity for labour force participation	38
4.2.5	Influence of religion for labour force participation	39
4.2.6	Influence of education level for labour force participation	40
4.2.7	Influence of sector for labour force participation	41
4.2.8	Influence of province for labour force participation	42
4.2.9	Influence of literacy in English for labour force participation	43
4.2.10	Influence of currently attending to an educational Institute for labour force participation	44
4.2.11	Influence of number of dependents (age less than 15) For labour force participation	45
4.3	Summary	45

## **CHAPTER 5**

### Modelling Female Labour Force Participation Using Binary Logistic Model

5.1	Introduction	46
5.2	Fitting Binary Logistic Regression model	46
5.3	Use Forward –LR Method	47
5.3.1	Goodness of Fit of the Fitted Model –Female LFP	48
5.4	Use Forward –Wald Method	52
5.4.1	Goodness of Fit of the Fitted Model –Female LFP	53
5.5	Use Backward –LR Method	55
5.5.1	Goodness of Fit of the Fitted Model –Female LFP	55
5.6	Use Backward –Ward Method	57
5.6.1	Goodness of Fit of the Fitted Model –Female LFP	57
5.7	Summary	59

## **CHAPTER 6**

### Empirical Results Derived from Logistic Regression Models for Labour Force Participation

6.1	Introduction	60
6.2	Variables Influence on Male Labour Force	60
6.3	Fitting Binary Logistic Regression Model for Male Labour Force	61
6.4	Goodness of fit of the fitted model –male LFP	62
6.5	Comparison of Results in Chapter 5 and 6	65

## **CHAPTER 7**

### Conclusion and Recommendation

7.1	Conclusion	69
7.2	Recommendation	
	7.2.1 Policy recommendations	71
	7.2.2 Recommendations for future studies	72
	Reference List	73
