## DECLARATION

I declare that this is my own work and this thesis does not incorporate without acknowledgement any material previously submitted for a degree or diploma in any other university or institute of higher learning and to the best of my knowledge and believe it does not contain any material previously published or written by another person except where the acknowledgement is made in the text.

Also, I hereby grant to University of Moratuwa the non-exclusive right to reproduce and distribute my thesis/dissertation, in whole or in part in print, electronic or other medium. I retain the right to use this content in whole or part in future works (such as articles or books).

## ABSTRACT

Worldwide, more than 1.2 million people die annually from road accidents and now it is the 8<sup>th</sup> leading cause of death in the world. In the context of Sri Lanka, road traffic injury is also a leading cause of mortality and morbidity. In year 2014, 35,967 crashes were reported where 6% of them are fatal contributing to 2,440 deaths. Providing effective countermeasures for the identified safety issues and proper policy developments are vital in mitigating the issue of road traffic accidents.

Under this study, a comprehensive analysis of road traffic crashes of the country in terms of descriptive statistics was carried out using 'Sri Lanka Police Accident Database' to find the road safety condition of the country with the objective of providing a basis to encourage concentrated and in depth studies in road safety of the country. Over the decade 2005 – 2014, on an average, 6 people have died every day in Sri Lanka from road traffic crashes. According to the accident details of the last five years, age group 15-29 accounted for 33% of the total casualties in the country and 23% of the total fatalities due to road crashes. Pedestrians accounted for 21% of those who died from 3W related crashes. Promotion of public transport, strict law enforcement on helmet usage, design change of three-wheelers to limit sharp turns and more road safety education are among the suggestions made that can improve the road safety condition.

However, only with descriptive statistics it is not possible to carry out an in depth review of the causes of accidents. Therefore, statistical methodologies have been improving which have enabled better safety design and policy improvements. In this study, a stepwise binary logistic regression was used for heavy vehicle related crashes to show the importance of accident analysis. Among the identified contributory factors, heavy vehicle crashes occurring during 03:00 – 06:00 hours, occurring at Batticalo, Chilaw and Jaffna DS Divisions and crashes involving intercity busses, semi government heavy vehicles are some of the factors that have a higher chance of becoming a fatal crash.

## DEDICATION

## ACKNOWLEDGEMENT

I would like to acknowledge many people who supported me to complete the master's research successfully. First of all, I would like to convey my sincere gratitude towards my supervisor, Prof. Saman Bandara, for giving me this opportunity, subject area and guidance which allowed me to explore many areas and complete the research successfully. Further for providing opportunity to attend conferences workshops for knowledge enhancement and reviewing the papers amidst his busy schedule. A special gratitude is also extended to Mr. Loshaka Perera for his continuous guidance, encouragement and support through various means to accomplish the research successfully.

Further thank goes to the progress review committee member Dr. T. Sivakumar of the Faculty of Transport and Logistics Management for his comments to improve the research output and sparing his valuable time to attend the progress reviews amidst the busy schedule. Thank goes to Dr. Lesly Ekanayake for his comments as a progress review committee member and facilitating the official process of the master's degree program as the research co-ordinator of the Department of Civil Engineering.

University of Moratuwa, Sri Lanka  
Electronic Theses & Dissertations

Thank goes to Prof. (Mrs.) Chintha Jayasinghe, Director Post Graduate Studies and Prof. S.M.A. Nanayakkara, Head Department of Civil Engineering for facilitating the official process and conducting seminars and workshops at faculty and department level to enhance the research skills of the research students.

This research work would not have been possible if it wasn't for the comments and suggestions from academic and professional experts in respective fields. Therefore, I would like to convey my special thanks for the following personnel for giving their time and expertise towards the successful completion of this research study.

Mr. H. M. K. G. G. Bandara

Prof. Sharon Barnhardt

Mrs. K. de Silva

Dr. L. I. N. de Silva

Dr. H. R. Pasindu

Further I like to thank my colleagues Mr. Nadika K. Jayasooriya, Mr. Chamod Hettiarachchi, Mr. Isuru Gamlath, Mrs. Gayani Galapaththi, Mrs. Ruksala Jayaratne, Ms. Shyamen Saparamadu, Ms. Anuja Fernando, Mr. Madhawa Premasiri, Mr. Deshan Gamage, Mr. Dilshan Gunasoma and others colleagues in transport and highway engineering labs for their continuous support, courage and comments given during the endeavours of the research. I would like to further thank Ms. Chathuri Andrahennadi and Mrs. Melani Jayakodi for their support in all official matters throughout this study.

Last but not least I would like to thank my parents, my brother and my relations for their unending support throughout my journey. Without them I wouldn't be able to accomplish any of the achievements that I have attained so far.
