Declaration

I declare that this dissertation is my own work and has not been submitted in any form for another degree or diploma at any university or other institution of tertiary education to the best of my knowledge and belief. Information derived from the published or unpublished work of others has been acknowledged in the text and a list of references is given. I also hereby give consent for my dissertation, if accepted, to be made available for photocopying and for interlibrary loans, and for the title and summary to be made available to outside organizations.

Acknowledgement

First of all I express my heartfelt appreciation and gratitude to my project supervisor Dr. Prasad Wimalaratne for his utmost guidance and valuable commitment to make this project success.

Also my sincere appreciation is extended to Dean of the faculty of Information Technology of University of Moratuwa, Professor Asoka S. Karunananda and the lecturer of the same faculty Mr. Saminda Premarathne for their guidance and kind support throughout the project completion.

I also take this opportunity to thank Mr. Tof Nicol-Griffith, Deputy General Manager (Information Technology) in Northsails and other production managers for their valuable opinions and encouragement given to me in this.

My sincere thank also goes to my father, mother, my wife Madhavie and my child Tenuki for their continuous support, encouragement and corporation extended to me to make my effort success.

Abstract

Citrix and web based Production visibility system was the title of the final project chosen to develop for North Sails Sri Lanka for the complete the project requirement of the MSc in Information Technology of the University of Moratuwa.

North Sails has become the world leader in sail making through an ongoing commitment to making sails that are faster, lighter and longer lasting than any other sails in the world. More than fifty years ago, a sail loft opened at the B-Street Pier in downtown San Diego, California. The space was living-room size at 15 feet by 40. "It was a little dusty and dirty but big enough to build a Star-boat mainsail," commented Lowell North, the owner.

North Sails is using the Microsoft Dynamics Great Plains ERP system for the business. Users are accessing the ERP system through a remote server environment called Citrix from worldwide. There are 23 different brother companies worldwide. This project is on the company which is operating in Sri Lanka.

The major weakness of the current system is there is no way to track the productions status of a manufacturing item, once it is in the production and the current system is a manual work. It is almost impossible to do the scheduling of the production correctly at time due to this reason. Customers are losing their comfort with the company because of these reasons.

For overcome the above issues, the production visibility system was proposed. That system will work to solve the company problems mentioned in above sections.

Once the sales orders received to the customer service of the company customer service reps are enters those in to the ERP system. After that they will enter the respective manufacturing orders for those. Once those are entered in to the system production scheduler schedule the production according to their priorities. They can arrange their schedules with the aid of the proposed visibility system. Once those are scheduled and in the production any of the end users can monitor the status of the WIP production.

Production supervisors can update the production status via handheld barcode devices when the production is going on. The facility is providing in the proposed system for this which is not in the ERP system. Also the production supervisors should provide the information about their labor capacity at earliest they can to the production schedulers.

By implementing the proposed system most of the issue will solve. Same time the company can gain hidden benefits like Customer satisfaction, internal user satisfaction, arrange the production schedules correctly, more labor time saving, etc.. So based on those factors company can earn more profit by implementing the proposed system.

Table of Content

	<i>Page Number</i>
Chapter 01- Introduction	01
1.1 Introduction	01
1.2 problem domain	01
1.3 Background	02
1.4 Motivation	05
1.5 Major issues of the current system	05
1.6 Aims & Objectives.....	06
1.7 Proposed solution.....	07
1.8 Summary.....	08
Chapter 02- Background and Literature Review	09
2.1 Introduction	09
2.2 Background.....	09
2.3 Crucial Issues.....	09
2.4 Analyzing of Possibilities.....	10
2.4.1 Use a ERP system which holds employee data such as labor hours	10
2.4.2 Use an SAP ERP system with labor hours	11
2.5 Summary.....	12
Chapter 03- Technology Adapted for the Application	13
3.1 Introduction	13
3.2 Crucial factors	13
3.3 Development of production visibility / monitoring system.....	14
3.3.1 Why it is not possible to have the system in the local domain server?	14
3.3.2 Why use Microsoft Access Program to develop system	15
3.4 Development of the production visibility / monitoring system - Database.....	15
3.4.1 Why use ODBC link for the database?	16
3.5 Development of an E-Commerce site	16

3.5	Development of an E-Commerce site	16
3.6	Development of Report Module	18
3.7	Summary	18
Chapter 04- Proposed Solution		19
4.1	Introduction	19
4.2	Users of the system	19
4.3	Inputs and Outputs of the System	21
4.4	Processes flow of the proposed system	23
4.5	How technologies are adapted in the solution	24
4.6	Summary	24
Chapter 05- Analysis and Design		25
5.1	Introduction	25
5.2	Requirement Analysis.....	25
5.3	User Requirements	27
5.4	Functional Requirements	28
5.5	Non Functional Requirements	29
5.6	Use case diagram of the proposed system	31
5.7	Summary	33
Chapter 06- Implementation of the Proposed System		34
6.1	Introduction	34
6.2	Implementation of modules.....	34
6.2.1	Implementation of Access program module.....	34
6.2.1.1	Implementation of Access based Manufacturing order status update by barcode readers program module	37
6.2.2	Report module	38
6.2.3	Implementation of the E-commerce site - Web portal	38
6.3	Summary.....	40

Chapter 07- Evaluation of the System	41
7.1 Introduction	41
7.2 Evaluation & Testing of the proposed system.....	41
7.3 Evaluation of the E Commerce Web Site.....	42
7.4 Evaluation of the Report Module.....	45
7.5 Evaluation of the Manufacturing Status Update via Barcode Readers.....	46
7.6 Evaluation of the Access Report Module.....	48
7.5 Summary.....	49
 Chapter 08- Conclusion and Future Work.....	50
8.1 Introduction	50
8.2 Whether Project Succeeded and Achieved Goal.....	50
8.3 Problems Encountered and Limitations of the Project.....	52
8.4 Future Work.....	53
8.5 Summary.....	53
