DECLARATION OF THE SUPERVISOR

“I have supervised and accepted this thesis/dissertation for the award of the degree”

UOM Verified Signature

Date: 22 May 2013

Prof. T.S.G. Peiris

Department of Mathematics

Faculty of Engineering

University of Moratuwa

Sri Lanka.

This report is dedicated to my parents, wife and daughter

ACKNOWLEDGEMENT

It is with pleasure that I express my affectionate and deeply felt gratitude to Prof. T.S.G. Peiris, Head of the Department of Mathematics and the Course Coordinator of MSc. in Operational Research (2008 Batch), whose guidance, invaluable suggestions and constant inspiration I have received ever since I became his student and after he became my supervisor for the research. His invaluable feedback and deep interest shown in the research stimulated me in making this thesis a reality.

I am no less grateful to all professionals of apparel factories in SME sector including owners, Factory Managers, Production Managers, Quality Manager, Work Study Officers, etc. and their subordinates for the support, well directed advices and information I received in making this thesis a success. Without their help in providing data and information this study may not be succeeded.

And also I must gratitude to all lecturers of the MSc. in Operational Research for their knowledge, experience and support shared with us during the course of the MSc.

And also I offer my sincere appreciation to all my Collins of the MSc. who helped me very substantially with their invaluable moral and material support. I must acknowledge all non-academic staff of Mathematics Department that helped me in arrangements, services and other works.

Finally special thanks go to my wife, parents and family members for their dedication and patience shown last few months which I was engaged with the research.

ABSTRACT

Apparel industry is one of the largest contributors in Sri Lankan economy while Small and Medium Enterprises (SME) play an important role. With the elimination of the quotas SME sector had to face the challenge of producing garments where competition is primarily based on price. Most consideration factors that affect on the price are high production cost, low productivity level, lack of skilled man power and lack of adoption to new and efficient technology. Enhancing the productivity respective to manufacturing process of the garment had been identified as a solution to face these emerging challenges of SME sector. However, at present productivity performance is evaluated by considering five Key Performance Indicators (KPIs) separately and this method creates problems in evaluating. Thus this study was carried out to develop a common index using five indicators based on three months data. Principal Component Analysis (PCA) and Cluster Analysis (CA) were carried out separately for all three months and as well as pooled data to achieve the objective.

Results found that the indicator developed consists of a linear combination of three Key Performance Indicators (Factory Efficiency – EFF, Defects Per Hundred Units – DHU and Absenteeism – ABS) can be used to assess factories either monthly basis or quarterly basis, instead of using the five KPIs separately. This new method is more efficient than the old method used. The developed indicator is named as “Direct Productivity Performance Indicator” and it is defined as: $PC_{Q1} = 0.523Z_{EFF} - 0.531Z_{DHU} - 0.481Z_{ABS}$. This method can be used to compare different factories as well.

Key Words: Key Performance Indicator, Principal Component Analysis, Cluster Analysis and Productivity

TABLE OF CONTENTS

	Page
Declaration of the candidate	i
Declaration of the Supervisor	ii
Dedication	iii
Acknowledgement	iv
Abstract	v
Table of Content	vi
List of Figures	x
List of Tables	xii
List of Abbreviations	xiv
CHAPTER 1: INTRODUCTION	1
1.1 Garment Industry in Sri Lanka	1
1.2 Present Situation of the industry	2
1.3 Significance of the study	5
1.4 Research Objectives	6
1.5 Chapter Outline of Thesis	6
CHAPTER 2: LITERATURE REVIEW	7
2.1 Apparel Industry and SME Sector	7
2.1.1 Contributions regarding improvement of Apparel Industry	7
2.1.2 Success and Failure of Apparel Entrepreneurs	8
2.1.3 Operational Effects in Apparel Firms	9
2.1.4 Management Practices and Performance	9
2.1.5 Small and Medium Enterprises Sector	10

2.2	Productivity Improvement and Performance Strategies	11
2.2.1	Potential for Productivity Improvement	11
2.2.2	Relationships of Company Performances	12
2.2.3	Relationships of Productivity to Utilization and Quality	12
2.2.4	Basics Productivity Techniques	13
2.2.5	Measurement of Productivity for Effectiveness	14
2.3	Key Performance Indicators	15
2.4	Summary of the Literature Review	16
CHAPTER 3: DATA AND METHODOLOGY		21
3.1	Data Used	17
3.1.1	Introduction	17
3.1.2	Identified Key Performance Indicators of Productivity (Variables)	17
3.1.2.1	Factory Efficiency	17
3.1.2.2	Defects per Hundred Units (DHU)	18
3.1.2.3	Absenteeism	19
3.1.2.4	Labour Turnover	19
3.1.2.5	Man to Machine Ratio	20
3.2	Principal Component Analysis (PCA)	21
3.2.1	Introduction	21
3.2.2	Geometric Rationale of PCA	22
3.2.3	Generalization to p -dimensions	23
3.2.4	Covariance vs Correlation	24
3.2.5	The Algebra of PCA	24
3.2.6	Selection of Axes	25
3.3	Cluster Analysis	26
3.4	Anderson – Darling Test	26

CHAPTER 4: DATA ANALYSIS AND RESULTS	28
4.1 Preliminary Analysis of Data for Month of January	28
4.1.1 Descriptive Statistics of Observed Variables	28
4.1.2 Correlations among variables	31
4.1.3 Principal Component Analysis: EFF, DHU, ABS, LT, MN: MC	32
4.1.4 Confirmation of the number of selected components	33
4.1.5 Clustering factories using PC1	34
4.1.6 Clustering factories using PC1 and PC2	35
4.1.7 Confirmation of the PCA to be used to evaluate factories in January	36
4.2 Preliminary Analysis of Data for Month of February	37
4.2.1 Descriptive Statistics of Observed Variables	37
4.2.2 Correlations among variables	40
4.2.3 Principal Component Analysis: EFF, DHU, ABS, LT, MN: MC	41
4.2.4 Confirmation of the number of selected components	42
4.2.5 Clustering factories using PC1	43
4.2.6 Clustering factories using PC1 and PC2	44
4.2.7 Confirmation of the PCA to be used to evaluate factories in February	45
4.3 Preliminary Analysis of Data for Month of March	46
4.3.1 Descriptive Statistics of Observed Variables	46
4.3.2 Correlations among variables	48
4.3.3 Principal Component Analysis: EFF, DHU, ABS, LT, MN: MC	49
4.3.4 Confirmation of the number of selected components	50
4.3.5 Clustering factories using PC1	51
4.3.6 Clustering factories using PC1 and PC2	52
4.3.7 Confirmation of the PCA to be used to evaluate factories in March	53

4.4 Preliminary Analysis of Average Data of first three months of the year	54
4.4.1 Descriptive Statistics of Observed Variables	54
4.4.2 Correlations among variables	57
4.4.3 Principal Component Analysis: EFF, DHU, ABS, LT, MN: MC	58
4.4.4 Confirmation of the number of selected components	59
4.4.5 Clustering factories using PC1	60
4.4.6 Clustering factories using PC1 and PC2	61
4.4.7 Confirmation of the PCA to be used to evaluate factories for Q1	62
4.4.8 Comparison of four results obtained	63
CHAPTER5: CONCLUTIONS AND RECOMMENDATIONS	65
5.1 Conclusions	65
5.2 Recommendations	65
