## **Abstract**

ICT is vital component for any organization. Over past ten years, there can be seen significant ICTI investment in public sector organizations to deliver their services to the general public. In the meantime ICTI maintenance cost of the public sector organizations have been increased due to a number of reasons. Hence, the main objective of this research is to study of the factors affecting to increase of ICTI maintenance cost in the public sector organizations.

Due to rapid change of ICT over the past two decades, the typical government institutions have been changing with respect to their business functions and maintenance cost of the ICTI has been increased over last five or six years. Therefore, it is very enthusiastic to study about the reasons for increasing of ICTI maintenance cost. It is identified that the specific objectives of this research are to study about the existing ICTI maintenance procedures in the public sector, to make aware of the officials regarding the ICTI maintenance of their institutions, to introduce the best practices for the reduction of the ICTI maintenance cost, to create a time framework with guidelines for the public sector organizations to understand how effective their ICTI and to introduce an evaluation mechanism for suppliers to evaluate their performance. The literature review revealed some factors regarding the ICTI and its maintenance and ICT supplier evaluation. Based on factors and strategies identified through the literature review and the experiences of the author, the conceptual model was built up. Based on the conceptual model, the writer made the questionnaire and were distributed among the respective officials of the selected organizations. Secondary Data was collected through the archival documents and other documents from the respective organizations. Having done a descriptive analysis with primary data and then comparative analysis with primary data and secondary data respectively. Ultimately conclusion and recommendations are made with respect to objectives and findings of the research study.

## Acknowledgement

Being a student of University of Moratuwa, I would like to recall my memory of the life I spent last two years in which I had engaged in MBA e-Governance programme in studying hard with great memories. This research thesis is compulsory for the fulfillment of my MBA degree in e-Governance.

First of all, I would like to take this opportunity to offer my sincere gratitude to my Supervisor Dr. Chathura de Silva, Senior Lecturer, Department of Computer Science and Engineering of the University of Moratuwa who gave me the real guidance spending his valuable time to make this effort a success. Without his support, this product would not have been a reality.

My deep appreciation should also be offered to Former additional secretary, Ministry of Education Mrs. Sandya Wijayabandara who had given me the support to obtain this Master Degree from the very beginning. I, would like to thank the staff of ICTA who gave me the support in every aspect.

Also, I wish to offer my gratitude to the Head and the Staff of the Department of Computer Science and Engineering university of Moratuwa and the Head of the selective organizations and the officials who responded to questionnaires and furnishing me with relevant documents from the selected public sector organizations despite of their duties in their offices. Also I wish to thank my MBA e- Governance and MBA-IT in 2009 colleagues who supported me to in different ways such as sharing knowledge, giving instructions and making clarifications and so on.
