## Abstract

In Air conditioning air blowers are working at full speed although the conditional area at set temperature. Tins situation consumed considerable amount of energy to drive \ the fan or blower and running the refrigeration cycle itself The amount of energy which is used to drive the air blower and refrigeration cycle of the air conditioning system can be considered as loss of energy. This loss can be minimized by introducing the Variable Speed Drive (VSD) to drive the air blower or fan by sensing the conditional area temperature etc.

Cost of the VSD is very high in the local market, and it creates long pay back period for investment of installing a VSD for air conditioning system. Also electricity tariff in Sri Lanka is very high and has a trend of increasing. Therefore by introducing VSD the electrical energy used for Air conditioning can be minimized.

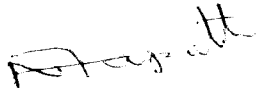

By considering the above facts low cost VSD is useful for the local market. In this project low cost Micro controller has been used as the motor control unit. Micro controller generates PWM to drive IGBTs in power module. The method used to vary the speed of induction motor is varying the voltage and frequency by keeping voltage/frequency ratio constant. Micro controller senses the variable voltage created by the potential meter or controller. TIns voltage is converted into form of binary value by one of analog to digital converter in the micro controller. This value is used to calculate pulse width and number of pulses in the period. The software program senses the ON/OFF switch input for the Micro controller and accordingly Run or Stop the motor.

The program can be further developed for improving reliability and safety of the

## DECLARATION

The work submitted in this dissertation is the result of my own investigation, except where otherwise stated.

It has not already been accepted for any degree, and is also not being concurrently submitted for any other degree.

N. T. Athapattu  
06 / 12 / 2006

I endorse the declaration by the candidate.

## Chapters

<b>1. Introduction</b>	<b>1</b>
<b>2. Design Consideration of the Variable Speed Controller</b>	<b>4</b>
2.1 Speed-Torque characteristics of the Induction motor	4
2.2 Load characteristics of the Induction motor	6
2.3 $V/f$ Control Theory	8
<b>3. Theoretical Developments</b>	<b>10</b>
3.1 Principal of Sinusoidal PWM control	10
3.2 Inverter Model	12
3.3 Output Voltages	13
3.4 Micro Controller unit (MCU) Implementation	16
3.5 Changing output frequency	17
<b>4. Micro Controller Unit motor controls</b>	<b>18</b>
4.1 MCU Types for Motor Controls	18
4.2 PIC 18F4431 Microcontroller	19
4.2.1 Features of 18F4431 Microcontroller	20
4.2.2 Power Control PWM Module	25
4.2.3 Control Registers	28

4.2.4	Module Functionality	29
4.2.5	PWM Time Base	30
4.2.6	PWM Period	32
4.2.7	PWM Duty Cycle	33
4.2.8	PWM Duty Cycle Registers	33
4.2.9	Edge-Aligned PWM	34
4.2.10	Complementary PWM Operation	35
4.2.11	Dead Time Generators	37
4.3	Control Strategy	39
4.3.1	V/F Control with Current Feedback	39
4.3.2	V/f Control of blower motor with Air temperature Feedback	40
4.4	Initializing the Power control PWM module and ADC module	41
4.5	Initializing the ADC module	42
4.6	V/F Control Firmware	43
4.7	PWM Waveform Synthesis	43
<b>5.0</b>	<b>Power Modules for Induction Motor Control</b>	<b>46</b>
5.1	Motor Drive Requirements	46
5.2	Six-packs configuration	47
5.3	Gate Drive requirements	48
5.3.1	IR2130 Block Diagram	49
5.3.2	Protection Circuits and Fault Reporting	51
5.4	Heat Sink Calculation for IGBT module	53
<b>6.0</b>	<b>Results</b>	<b>56</b>

<b>7.0 Conclusion and Future Developments</b>	<b>59</b>
7.1 Conclusion	59
7.2 V/f Control with Velocity Feedback and Current Feedback	59
7.3 Additional features for VSD	61
7.4 Pay back period for VSD	62
<b>References</b>	<b>64</b>
<b>Appendices</b>	
<b>Appendix A</b> - Software Program for Micro Controller	65
<b>Appendix B</b> - PIC 18F4431 Micro controller pin arrangement	80
<b>Appendix C</b> - PIC 18F4431 Micro controller pin description	81
<b>Appendix D</b> - IR2130 three phase bridge driver data sheet	86
<b>Appendix E</b> - IRG4PC30KD IGBT data sheet	88
<b>Appendix F</b> - HCPL 2531 High speed transistor optocouplers data sheet	90
<b>Appendix G</b> -LM35DZ Temperature sensor data sheet	92

## **Acknowledgement**

Thanks are due first to my supervisor, Dr J. P. Karunadasa senior lecturer Department of Electrical Engineering, for his great insights, perspectives, guidance and sense of humor. My sincere thanks go to Professor Ranjith Perera, Head of Department Electrical Engineering, and Dr Lanka Udawatta lecturer Department of Electrical Engineering, for helping various ways to clarify the things related to my academic work with excellent cooperation and guidance. Sincere gratitude is also extend to Dr Thrishantha Nanayakkara, lecturer Department of Mechanical Engineering, for his guidance for programming of PIC micro controllers and related things. Finally, I should thank many individuals, friends and colleagues who have not been mentioned here personally in making this education process successful.
