# Appendix A

## Feasibility study

### A.1. Economic Feasibility

When discussing with the management about the requirements, they showed their interest on hiring database space at the initial stage from a database service provider but having evaluated the system against objectives they'll decide whether to buy an own server with required resources. But for the time being the management agreed to hire server space from an outside service provider.

Management agreed to provide cost of the training without any concern as they expect developer to train their users to perform intended activities without any interruption to their day-to-day operations.

#### A.1.1. Risks to the ABC Supermarket

Since the management is fully agreed to provide financial support for the development and implementation, there is no risk of either reducing or losing financial support.

### A.2. Technical Feasibility

#### A.2.1. Resource Availability

##### A.2.1.1. Hardware & Software

Since the database server, web server and application server will be hired from a service provider; there is no need of acquiring any hardware. The existing hardware can be used at this phase of the project. The annual rental & the cost of the internet domain name is Rs. 5750.00.

There is no need of acquiring any new software as available EPOS data as well as SCP data can be converted in to CSV format and upload.

Therefore "ABC" Supermarket does not have to spend additional cost to acquire hardware or software

## A.2.2. Technology Use

The proposed system will be developed by using following technologies which are freely available and widely used in software industry around the world. Those technologies are free of charge and all supporting documents, manuals are freely available to download from the internet with no cost.

Operating System	Windows 2000 , Windows XP
Programming Languages	PHP , MySQL
HTTP Server	Apache HTTP Server
Web Browser	Fire Fox , Internet Explorer
Designing Tool	Adobe Dream Weaver 8.0

Since a leading Fast Moving Consumer Goods company in Sri Lanka is being used a similar system, the knowledge on that system can be used at the development stage.

## A.2.3. Risks

### A.2.3.1. Development Risk

#### A.2.3.1.1. Technical Know-how

- Developer is familiar with PHP and Apache Server technologies.
- Developer is familiar with MySQL.
- Developer has to improve little Knowledge about designing GUI s.
- Developer is familiar with Software project management methods.

Due to the rapid changes happening in the IT industry globally, there can be changes in the technologies used to develop.

Since the developer is with non-IT domain and new to the industry soon after the theoretical sessions, lack of experience may have a major impact on the development of the project and the proposed technologies are new to the developer. Therefore, the developer has to acquire expertise knowledge from technically sound and experience developers which will need some time to be fully familiar with.

However, the developer has taken this as a challenge and try his best to deliver the project on-time-in full.

#### **A.2.3.2. Project Risk**

System Development Goals and schedule may not be achieved on-time-in-full due to;

- a. Lack of technical know how which is going to be used to develop the project
- b. Developer may get sick
- c. Developer may have other implications such as family commitments
- d. Prevailing security situation in the country may effect on the development as a terrorist attack may cripple the whole day-to-day life

While developing the system, there could be a management change happened and their priorities will be different than earlier management's priorities. The interest on the proposed system would be in danger.

#### **A.2.3.3. Product Risk**

While developing the product, there will be changes in the requirements. Initial requirements could be either changed or modified according to the business needs. Users will expect more than what they express at the requirements gathering. The size of the system could be either over estimated or under estimated by the users.

To avoid above mentioned risks, an agreement of business requirements should be in place signed by relevant authorities.

### **A.3. Organizational Feasibility**

#### **A.3.1. Organization Risk**

By implementing proposed replenishment system, there is no risk of losing jobs of present employees as the employees who are directly involved in ordering system of branches as well as CPU can save their time. Management can effectively use that time for another productive activity which needs human interaction very badly.

Employees of the ABC Supermarket showed a considerable interest over the proposed system as they are looking forward to get rid of manual work. When discussing about the proposed system, employees showed their keenness over the proposed system and that reflects there is no threat of refusing the product.

The management is fully impressed after educating them on the benefits of this kind of system such as accurate sales forecasting. Management of "ABC" Supermarket is expressed their concerns over stagnation of un-necessary products at the CPU and also branches are running short of fast moving products due to inaccurate forecasting. Since EPOS data is already available with "ABC" Supermarket, management was fully agreed to utilize available asset for the accurate sales forecasting. By implementing this kind of system, management is planning to reduce their operational costs such as warehouse cost, Bank interests etc. and at the same time they are planning to increase their profit margins by making available all fast moving products at every branch which increase "ABC" supermarket's cash flow.

### **A.4. Legal Feasibility**

#### **A.4.1 License**

For the existing windows operating system and stock control package, "ABC" Supermarket has already purchased licenses.

For the proposed system, there is no need of licenses as the system will be developed by using open source software.

## A.4.2. Agreement

The proposed system will be developed as per the mutual understanding between developer and “ABC” Supermarket

## A.4.3. Confidential Documents & Data

The developer will be fully responsible for the documents and data took over from “ABC” Supermarket until the end of the project and are bound to hand over all the confidential documents and data back-ups obtained for the testing at the movement of sign-off of the project.

## A.5. Cost Benefit Analysis

### A.5.1. Tangible Costs

#### A.5.1.1. Annual Cost

Server Rent =  Rs.5000.00 of Moratuwa, Sri Lanka.  
Electronic Theses & Dissertations  
[www.lib.mrt.ac.lk](http://www.lib.mrt.ac.lk)

#### A.5.1.2. Monthly Cost

Cost of ADSL Connection = Rs.45500.00 (Rs.6500.00 Per Connection x 7)

This cost is already been built in to ABC Supermarket’s budget as it already uses these connections

#### A.5.1.3. One Time Cost

Internet Domain name = Rs.750.00

Cost for Training = Rs.18000.00

Total one time cost = Rs.18750.00

# Use case, activity diagrams and use case descriptions for the existing system

## Test cases and test results

<b>Test Case ID</b>	1	
<b>Tested Component</b>	User Log-in	
<b>Tested Area</b>	Functionality	
<b>Purpose</b>	User can Log-in with username and password	
<b>Prerequisites</b>	User exist and user status must be active	
<b>Test Data</b>	Username = {valid, invalid, empty} Password = {valid, invalid, empty}	
<b>Test Case Description</b>		
<b>No.</b>	<b>Test Case</b>	<b>Expected output</b>
1	Enter username and password	Load home page
2	Enter invalid username and password	Error message "Invalid Username or Password. Please enter again" should be displayed
3	Enter empty username and password	Error message "Username / Password is missing. Please enter username / Password" should be displayed

<b>Test Case ID</b>	1	
<b>Tested Component</b>	User login	
<b>Test Results Description</b>		
<b>Test Case - 1</b>	<b>Enter valid username and password</b>	
Input Specification	Text, Numeric	
Sample Data	Username: admin , password: admin123	
Test Result	Pass	
Remarks	Correct user identified by the system	
<b>Test Case - 2</b>	<b>Enter invalid username and password</b>	
Input Specification	Text, Numeric	
Sample Data	Username : crbt , Password: abc	
Test Result	Pass	
Remarks	System does not accept the user	
<b>Test Case - 3</b>	<b>Enter empty username and password</b>	
Input Specification	Keep blank	
Sample Data	Username : , Password :	
Test Result	Pass	
Remarks	System do not accept the username or password	

Figure K.1 – Test result - User Log-in

Figure K.1 – Test Case - User Log-in

<b>Test Case ID</b>	2	<b>Test Case ID</b>	2
<b>Tested Component</b>	Upload Sales Data	<b>Tested Component</b>	Upload Sales Data
<b>Tested Area</b>	Functionality	<b>Test Results Description</b>	
<b>Purpose</b>	To check whether the user can Upload Sales Data file in to the data base	<b>Test Case - 1</b>	<b>Upload valid file</b>
<b>Prerequisites</b>	User must already logged-in to the system. Sales date file for upload must be available	Input Specification	Data File
<b>Test Data</b>	File = {valid, invalid}	Sample Data	CSV File
<b>Test Case Description</b>		Test Result	Pass
<b>No.</b>	<b>Test Case</b>	Remarks	Sales data table updated
1	Upload valid file	<b>Test Case - 2</b>	<b>Upload in-invalid file</b>
		Input Specification	Data File
		Sample Data	Text file
2	Upload in-invalid file	Test Result	Pass
		Remarks	Sales data table did not update

<b>Test Case ID</b>	3	<b>Test Case ID</b>	3
<b>Tested Component</b>	Upload Stock Data	<b>Tested Component</b>	Upload Stock Data
<b>Tested Area</b>	Functionality	<b>Test Results Description</b>	
<b>Purpose</b>	To check whether the user can Upload Stock Data file in to the data base		
<b>Prerequisites</b>	User must already logged-in to the system. Stock data file for upload must be available		
<b>Test Data</b>	File = {valid, invalid}		
<b>Test Case Description</b>			
<b>No.</b>	<b>Test Case</b>	<b>Expected output</b>	
1	Upload valid file	Message " File upload successful" should be displayed	
2	Upload in-invalid file	Error message "File upload Failed. Try Again" should be displayed	
<b>Test Case - 1</b>		<b>Upload valid file</b>	
Input Specification		Data File	
Sample Data		CSV File	
Test Result		Pass	
Remarks		Stock data table updated	
<b>Test Case - 2</b>		<b>Upload in-invalid file</b>	
Input Specification		Data File	
Sample Data		Text file	
Test Result		Pass	
Remarks		Stock data table did not update

<b>Test Case ID</b>	4	<b>Test Case ID</b>	4
<b>Tested Component</b>	Enter Critical Stock Cover	<b>Tested Component</b>	Enter Critical Stock Cover
<b>Tested Area</b>	Functionality	<b>Test Results Description</b>	
<b>Purpose</b>	To check whether the user can change default Critical Stock Cover	<b>Test Case - 1</b>	Leave default Critical Stock Cover as it is
<b>Prerequisites</b>	User must already logged-in to the system. Default Critical Stock Cover must be displayed	Input Specification	Numeric
<b>Test Data</b>	Critical Stock Cover = {Default, New, Empty}	Sample Data	Default Critical Stock Cover
<b>Test Case Description</b>		Test Result	Pass
<b>No.</b>	<b>Test Case</b>	Remarks	Critical Stock Cover in the system did not changed
1	Leave default Critical Stock Cover as it is	<b>Test Case - 2</b>	Enter new Critical Stock Cover
2	Enter new Critical Stock Cover	Input Specification	Numeric
3	Enter empty Critical Stock Cover	Sample Data	Critical Stock Cover = "5"
		Test Result	Pass
		Remarks	Critical Stock Cover in the system updated
		<b>Test Case - 3</b>	Enter empty Critical Stock Cover
		Input Specification	
		Sample Data	Critical Stock Cover = ""
		Test Result	Pass
		Remarks	System not accept the Critical Stock Cover

<b>Test Case</b>	Enter valid branch code & details		
<b>Input Specification</b>	Numeric , Text		
<b>Sample Data</b>	Branch code = 'BRKD01' Branch Name = 'ABC' - Kandy City Branch Town = Kandy		
<b>Test Result</b>	Pass		
<b>Remarks</b>	System Creates a new branch		
<b>Test Case</b>	Enter existing branch code & details		
<b>Input Specification</b>	Numeric , Text		
<b>Sample Data</b>	Branch code = 'BRKD01' Branch Name = 'ABC' - Kandy City Branch Town = Kandy		
<b>Test Result</b>	Pass		
<b>Remarks</b>	System does not create branch since it is available		
<b>Test Case</b>	Enter in-valid branch code & details		
<b>Input Specification</b>	Numeric , Text		
<b>Sample Data</b>	Branch code = 'BR66KD01' Branch Name = 'ABC' - Kandy City Branch Town = Kandy		
<b>Test Result</b>	Pass		
<b>Remarks</b>	System does not create branch		
<b>Test Case</b>	Enter empty branch code & details		

Input Specification	Numeric , Text
Sample Data	Product code = ' ' , Product Name = " " , Unite per case = '120' , Pack size = 130g Critical Stock Cover = '25 Historical Days = '4' , Supplier ID = '6'
Test Result	Pass
Remarks	System does not create branch

Figure K.15 – Test result – Create branch

Figure K.15 – Test Case – Create branch

<b>Test Case ID</b>	16
<b>Tested Component</b>	Edit Branch
<b>Tested Area</b>	Functionality
<b>Purpose</b>	Edit Branch details
<b>Prerequisites</b>	Branch must be an existing Branch of the system
<b>Test Data</b>	Branch Code = { Valid , Empty }
<b>Test Case Description</b>	
<b>No.</b>	<b>Test Case</b>
1	Select valid Branch code
2	Select empty Branch code
	<b>Expected output</b>
	Branch details should be displayed. Message "Branch does not exist. Please re-check" should be displayed

<b>Test Case ID</b>	16
<b>Tested Component</b>	Edit Branch
<b>Test Results Description</b>	
<b>Test Case - 01</b>	<b>Select valid branch code</b>
Input Specification	Texts , numeric
Sample Data	Product code = "SUP001"
Test Result	Pass
Remarks	System displays branch details to be edited
<b>Test Case - 02</b>	<b>Enter empty branch code</b>
Input Specification	Texts , numeric
Sample Data	Branch code = ""
Test Result	Pass
Remarks	System refuses to display details

Figure K.16 – Test result – Edit branch

Figure K.16 – Test Case – Edit branch

<b>Test Case ID</b>	18	<b>Test Case</b>	<b>Expected output</b>
<b>Tested Component</b>	Create Supplier	Enter valid Supplier code & details	Message "Supplier created successfully" should be displayed.
<b>Tested Area</b>	Functionality	Enter existing Supplier code & details	Message "Supplier already exists" should be displayed
<b>Purpose</b>	Add Supplier to the system	Enter in-valid Supplier code & details	Message "Supplier not created. Please re-check Supplier details" should be displayed
<b>Prerequisites</b>	Supplier must not be an existing Supplier of the system	Enter empty Supplier code & details	Message "Supplier not created. Please re-check Supplier details" should be displayed
<b>Test Data</b>	Supplier code = {Valid, In-valid, Empty } Supplier details = {Valid, In-valid, Empty }		
<b>Test Case Description</b>			
<b>No.</b>	<b>Test Case</b>	<b>Expected output</b>

## Appendix M

### User manual – For supervisor

#### 1. Login to the System

Current GUI reference No	Activity	Result GUI reference No
1	Enter username & password	2

#### 2. Upload data

Current GUI reference No	Activity	Result GUI reference No
2	Select Upload Sales Data under Upload Data of tree menu	3.1
2	Select Upload Stock Data under Upload Data of tree menu	3.2

#### 3. Generate Order

Current GUI reference No	Activity	Result GUI reference No
2	Select Enter Critical Stock Cover under Generate Order of tree menu	4.1
2	Select Enter Historical Days under Generate Order of tree menu	4.2
2	Select Order Generation under Generate Order of tree menu	4.3

#### 4. View Order

Current GUI reference No	Activity	Result GUI reference No
2	Select View Branch Order under View Order of tree menu	5.1
2	Select View Supplier Order under View Order of tree menu	5.2

### 5. Sys Admin – User Maintenance

Current GUI reference No	Activity	Result GUI reference No
2	Select Create User under User Maintenance of Tree menu	6.1.1
2	Select Edit User under User Maintenance of Tree menu	6.1.2
2	Select Delete User under User Maintenance of Tree menu	6.1.3

### 6. Sys Admin – Product Maintenance

Current GUI reference No	Activity	Result GUI reference No
2	Select Create Product under Product Maintenance of Tree menu	6.2.1
2	Select Edit Product under Product Maintenance of Tree menu	6.2.2
2	Select Delete Product under Product Maintenance of Tree menu	6.2.3

### 7. Sys Admin – Branch Maintenance

Current GUI reference No	Activity	Result GUI reference No
2	Select Create Branch under Branch Maintenance of Tree menu	6.3.1
2	Select Edit Branch under Branch Maintenance of Tree menu	6.3.2
2	Select Delete Branch under Branch Maintenance of Tree menu	6.3.3

## 8. Sys Admin – Supplier Maintenance

Current GUI reference No	Activity	Result GUI reference No
2	Select Create Supplier under Supplier Maintenance of Tree menu	6.4.1
2	Select Edit Supplier under Supplier Maintenance of Tree menu	6.4.2
2	Select Delete Supplier under Supplier Maintenance of Tree menu	6.4.3
