DECLARATION

“I declare that this is my own work and this thesis/ dissertation does not incorporate without acknowledgement any material previously submitted for a Degree or Diploma in any other university or institute of higher learning and to the best of my knowledge and belief it does not contain any material previously published or written by another person except where the acknowledgement is made in the text.”

Also, I hereby grant to the University of Moratuwa Sri Lanka the non-exclusive right to reproduce and distribute my thesis/ dissertation, in whole or in part in future works.

DEDICATION

This thesis is dedicated to my loving parents, my husband and the supervisor of my research, Dr SD Jayasooriya, Head of the Department of Quantity Surveying, General Sir John Kotalwala Defence University who always encouraged me to complete this research.

ACKNOWLEDGEMENT

My foremost gratitude goes to the supervisor of my research Dr SD Jayasooriya, Head of the Department of Quantity Surveying, General Sir John Kotelawala Defence University and the coordinator of the MSc in Financial Mathematics Programme, lecturer Dr Miuran Dencil Jayaweera of Department of Mathematics for their continuous guidance and encouragement throughout this study and for being such a kind person and all the staff of Department of Mathematics of the University of Moratuwa Sri Lanka.

Finally, I thank all who have helped me in many ways to make this a reality. The product of this research paper would not be possible without all of them.

ABSTRACT

A financial distressed situation means a company cannot settle its obligations, liabilities from the operating cash flows or value of total assets is lower than the aggregate value of the liabilities and equity. The probability of bankruptcy should be evaluated to reduce its' harmful effects. In such a situation, the firms should have to incur bankruptcy costs. It can be minimized through the evaluation of the possibility of financial distress. Up to now various types of models are generated to forecast bankruptcy. In this study, three models are evaluated to compare their distress prediction ability within the Sri Lankan Context. They are Altman's (1968) and Springate Model (1978) and Grover Model (2001). Therefore, the objective of this research is to identify the applicability of these models in forecasting the financial distress of listed companies in Sri Lanka. Those models are analyzed within the listed companies of the Colombo Stock Exchange. The relevant financial data is collected from the audited financial statements during the period of 2013/14-2017/18.

Descriptive Statistics and Regression Analysis are used to analyze collected data with Multivariate Discriminant Analysis (MDA) as the main method of analysis. The objective of this method is to identify groups of samples from a group of predictors by finding the relationship of the variables which maximize the deviance among the populations being studied.

The study findings reveal that Altman's model has a higher accuracy rate in predicting financial distress in a non-distressed sample rather than a distressed sample and can predict financial distress before one year to bankruptcy. Yet the Springate model has an excellent predicting ability both in distressed and non-distressed samples. And also, it can reveal a symptom of financial distress before three years to the bankruptcy. Therefore, it can be concluded that the Springate model is performed well than Altman's model within the Sri Lankan context.

Key Words: Financial Distress, Altman's Model, Springate Model, MDA

CHAPTER 2 - LITERATURE REVIEW	11
2.1 Bankruptcy, Financial Distress, Insolvency	11
2.2 Models of Bankruptcy Prediction	12
2.2.1 Altman model (1968).....	13

Altman (1968) chose a cut-off point (z-score) of 2.99. A greater z-score than the cut-off value reveals that the firm is not bankrupt, but a z-value lower than the cut-off value indicates that the company is bankrupt, and values between the above two values are regarded to be in the grey region.	15
2.2.2 Altman’s model (1983)	15
2.2.3 Altman’s model (1993)	16
2.2.4 Springate model (1978)	17
2.3.5 Grover model (2001)	20
2.3 Summary	21
CHAPTER 3 - METHODOLOGY	22
3.1 Research Design	22
3.2 Research Model and Operationalization	22
3.2.1 Independent variables	23
3.3 Procedures	26
3.3.1 Population and sample	26
3.3.2 Data collection method	27
3.3.3 Mode of analysis	27
3.3.4 Regression analysis	27
3.3.4.1 Ordinal logistic regression analysis	28
3.3.4.1.1 Factor or covariate pattern	30
3.3.4.1.2 Cumulative event probability	30
3.3.4.1.3 Standard error	31
3.3.4.1.4 Odds ratio	32
3.3.4.1.5 Confidence intervals	32
3.3.4.1.6 Log-likelihood	32
3.3.4.1.7 Variance-covariance matrix	32
3.3.4.1.8 Goodness of fit tests	33
3.3.4.1.9 Measures of association	33

3.3.4.2 Binomial logistic regression analysis	34
CHAPTER 4 - DATA PRESENTATION AND ANALYSIS	36
4.1 Introduction	36
4.2 Analysis of Altman's model.....	36
4.2.1 Descriptive statistics.....	36
4.2.2 Implication of Altman's model to the sample	39
Table 4.6 shows that 48.52 percent of the distressed firms examined were correctly identified, while 24.59 % were classified as non-distressed, and 26.89 % were difficult to assess. (See Appendix III for more information.)	40
4.2.3 Analysis of predicting ability of Altman's model	40
4.2.4 Regression analysis	41
4.3 Springate Model	44
4.3.1 Descriptive statistics.....	44
4.3.2 Implication of Springate (1978) Score for the samples	45
4.3.3 Analysis of predicting ability of Springate's model	47
4.3.4 Regression analysis	47
4.4 Grover Model	49
4.4.1 Descriptive Statistics	49
4.4.2 Implication of Grover model for the sample	50
4.4.3 Analysis of Predicting ability of Grover model.....	52
4.4.4 Regression Analysis	52
4.5 Summary.....	54
CHAPTER 5 - CONCLUSION AND RECOMMENDATION	56
5.1 Introduction	56
The chapter summarizes the important findings, draws judgments, and makes suggestions for future research investigations.	56
5.2 Summary of Findings and Discussions	56
5.3 Conclusion	57
5.4 Implications	58

5.5 Limitations	58
5.6 Outlook for Future Research	59
6. REFERENCE LIST	61
