Thesis/Dissertation submitted in fulfillment of the requirements for the
degree Master of Science in Computer Science

Department of Computer Science

University of Moratuwa

Sri Lanka

July 2022

DECLARATION

I declare that this is my own work and this thesis/dissertation² does not incorporate without acknowledgement any material previously submitted for a Degree or Diploma in any other University or institute of higher learning and to the best of my knowledge and belief it does not contain any material previously published or written by another person except where the acknowledgement is made in the text.

Also, I hereby grant to University of Moratuwa the non-exclusive right to reproduce and distribute my thesis/dissertation, in whole or in part in print, electronic or other medium. I retain the right to use this content in whole or part in future works (such as articles or books).

ABSTRACT

Financial Time Series prediction is a challenging task due to its dependency in many socio-economic factors. It depends on both quantitative and qualitative factors in a Financial Market. Quantitative factors can be mathematically modeled but qualitative factors are harder to model. Market behavior depends on both micro-economic as well as macro-economic behavior which includes quantitative and qualitative factors on both of them. Therefore modeling and predicting a financial time series has become a challenging task in Big Data Analytics world.

Deep Neural Networks can be identified as a main tool in Big Data Analytics which could solve the above challenge. Long Short Term Memory Units and Gated Recurrent Units in deep neural networks can accommodate memory cells which can store an accumulated memory. This helped to accurately capture the dependencies of the current data point by previous data points. Financial Time Series heavily depends on their predecessors and these concepts managed to capture such relationships.

This research use a combination of LSTM and GRU Units to accurately predict the Index Close Price of Tadawul All Share Index (TASI) and Stock Close Price of five highly tradable stocks in Tadawul Stock Exchange. Open, High, Low and Close Prices as well as Standard Technical Indicators of Stocks and Indices are primarily used to create the model. Principal Component Analysis is used to reduce the dimensionality. OHLC and Technical Indicator Values are fed to the network based on four different topologies creating four Evaluator Models.

DEDICATION

This work is dedicated to my parents who have always loved me unconditionally and whose good examples have taught me to work hard for the things that I aspire to achieve.

This thesis work is also dedicated to my beloved wife who has been a constant source of support and encouragement throughout my life. I am truly blessed for having you in my life.

At the same time I would like to dedicate this thesis for my dear colleagues who have been a constant source helping hand during this post graduate journey. You guys are the best.

ACKNOWLEDGEMENTS

I have received a great deal of support and assistance from many intellectuals during the completion of my dissertation.

First and Foremost, Thank you to my supervisor, Dr. Amal Shehan Perera, for your patience, guidance, and support. I have benefited greatly from your wealth of knowledge and expertise in the field of data science. I am extremely grateful that you took me on as a student and continued to have faith in me over the past year.

I would also like to express my sincere gratitude to Dr. Sapumal Ahangama for the valuable advices provided during the entire research. Your encouraging words and thoughtful, detailed feedback have been very important to me.

Thank You , Mr.Lasintha Ferdinando and Mr. Dassana Jayalath, for your valuable guidance and advices throughout the research period. You provided me with the valuable domain information and insight that I needed to choose the right direction and successfully complete my dissertation.

I would like to extend my thanks towards DirectFN for providing me with all-important data to work on my research. These results and insight would not be possible without the valuable data you provided free of charge.
