GENERALIZED MANIPULATION OF PORTLETS: A CASE ON UNIVERSITY PORTAL SYSTEM

This dissertation was submitted to the
Department of Computer Science and Engineering,
University of Moratuwa in partial fulfilment of the requirements for the Degree of MSc
in Computer Science
specializing in Software Engineering

by

DECLARATION

The work submitted in this dissertation is the result of my own investigation, except where otherwise stated.

It has not already been accepted for any degree, and is also not being concurrently submitted for any other degree.

B. K. P. Fernando

We endorse the declaration by the candidate.

Abstract

Portlets based portal technology is gaining quite a momentum for the past years providing range of different high-level services for their users such as personalization, single sign-on (SSO), aggregation and customization features. It is also gaining attention among the majority of the people due to its ease in development, richness in functionality, customization of interface and pluggable architecture.

Today we can find several open and close source portal and portal frameworks that address most of our required portal functionality with set of new features and functionalities. So it is important to get the state of the art technology advantage over the existing portal solution to gain the above mentioned benefits.

In this research project, it addresses the requirement of the university wide portal and designs a portal solution covering the entire university. It also implements the portal site for the Department of Computer Science and Engineering while providing enhanced set of features and functionality over the existing department portal site.

The current research work focuses on developing a communication channel to make the inter portlet communication possible between different portlets according to the JSR-168 guidelines. It also discusses some of the issues faced in the development and running the portal site and possible future implications.

Acknowledgements

First and foremost, I would like to thank my supervisors Dr. Lanka Udawatta and Mr. Shantha Fernando, for their great insights, guidance and invaluable suggestions which enabled me to complete this project successfully.

I am also grateful to Mr. G.C de Silva, PhD candidate at Tokyo University for helping me on doing the literature review and providing valuable feedback on my research idea.

My sincere thanks go to Dr. Sanath Jayasena, MSc co-ordinator/ former Head of the Department of Computer Science and Engineering for helping in various ways to clarify the things related to my academic work in time, and to the rest of the CSE department staff including Dr. Gihan Dias and Ms. Vishaka Nanayakkara for their support and guidance.

I would like to express my gratitude to Dharshana Jayawardana, Project Manager at Creative Technology Solutions (Pvt.) Ltd for granting leave and providing fullest support to complete this research project successfully on time.

Finally, I should thank many individuals, friends and colleagues who have not been mentioned here personally in making this educational process a success. May be I could not have made it without their support.
