

APPLICATION OF THE PROBABILITY MATRIX METHOD

TO THE

LABUGAMA & KALATUWAWA RESERVOIRS

A Dissertation submitted in partial fulfilment of the requirements for the degree of Master of Engineering in the Department of Civil Engineering of the University of Moratuwa.

August 1989.

53862

ACKNOWLEDGEMENTS

I am greatly indebted to Dr. S.S. Wickramasuriya, the project supervisor for his invaluable guidance and supervision given throughout for me to carry out this research and complete the report in the present entity.

I am grateful to the Vice-chancellor, the Dean of the Faculty of Engineering and the course co-ordinator, Dr. C. Kariyawasam for their interest in and support of my application to persue this post-graduate study.

I am also grateful to the General Manager, the Deputy General Manager (Operation & Maintenance) the Assistant General Manager (Operation & Maintenance) of the National Water Supply & Drainage Board, the officers in charge of Kalatuwawa & Labugama Water Supply Schemes, in particular Mr. Ranjith Ranasinghe & Mr. S.S. Devaraja for providing me with the required data for the research.

I also wish to record my gratitude to the Assistant General Manager (Designs), the Chief Engineer (Designs) of the National Water Supply & Drainage Board for allowing me to use the computers for my research programmes.

Finally, I wish to record my appreciation for the assistance given by Mrs. S. Hewawasam in typing the final copy of this report.

This is to certify that this Dissertation has not been previously presented in whole or part, to any University or Institution for a higher degree.

ABSTRACT

The research considers the application of the Probability Matrix Method to Labugama and Kalatuwawa reservoirs and storage-draft-probability of failure relationships have been derived.

The study shows that preliminary design procedures using the Mass Curve Method/Residual Mass Curve Method also give useful results which can be used in the Probability Matrix Method.

The Probability Matrix Method requires a relatively large computational effort. It has been observed that for satisfactory results a large number of zones are needed in the analysis without which the hunting effect arises.

TABLE OF CONTENTS

		Page Number
Chapter 1 -	Introduction	
	1.1. Historical background	1
	1.1.1 Labugama reservoir	2
	1.1.2 Kalatuwawa reservoir	7
	1.2. Objectives of study	7
	1.3. Literature review	8
	1.3.1 Review of preliminary design techniques and their applications	8
	1.3.2 Review of final design techniques and their applications	12
Chapter 2 -	Data Collection	
	2.1. Monthly runoff data	20
	2.2. Rainfall data	21
	2.3. Estimation of missing data	21
Chapter 3 -	Reservoir Storage Analysis.	
	3.1. Storage - Yield problem	23
	3.2. Mass curve method	24
	3.3. Residual mass curve method	25
	3.4. Probability matrix method (Simultaneous model)	25
Chapter 4 -	Results & Discussion	
	4.1. Basic flow parameters	31
	4.2. Mass curves & storage draft relations	31
	4.3. Storage - draft - probability of failure relationships	32
Chapter 5 -	Conclusions & recommendations	44

	Page Number
References	48
Appendix A- Reservoir level - capacity diagrams	51
Appendix B- Inflow data.	53
Appendix C- Rainfall data	54
Appendix D- Basic data used in this study	55
Appendix E- Computation of monthly inflows	56
Appendix G- Programme details for Simultaneous - model	57
Appendix H- Transition and steady state probability matrices	61
Appendix J- Storage - draft - probability of failure values	63
Appendix K- An example - probability matrix method, simultaneous model.	67
Appendix L- Long term probability distribution of reservoir states	70
Appendix M- Gould's (modified) probability matrix method	72
