Dissertation submitted in partial fulfilment of the requirements for the
degree Master of Business Administration in Information Technology

Department of Computer Science & Engineering

University of Moratuwa
Sri Lanka

January 2012

Declaration

I declare that this is my own work and this thesis/dissertation² does not incorporate without acknowledgement any material previously submitted for a Degree or Diploma in any other University or institute of higher learning and to the best of my knowledge and belief it does not contain any material previously published or written by another person except where the acknowledgement is made in the text.

Also, I hereby grant to University of Moratuwa the non-exclusive right to reproduce and distribute my thesis/dissertation, in whole or in part in print, electronic or other medium. I retain the right to use this content in whole or part in future works (such as articles or books).

Abstract

Adopting of Agile project management is a challenge for any organization. Agile is not a new concept to the IT community; it is used by many software companies to manage their software development projects. These concepts are not new even to Sri Lanka, but it's not a common practice among most of the organisations. There are a few software companies who use Agile project management approach to manage their software projects. There are many challenges in adopting agile techniques to manage and execute projects. Since the Agile project management can overcome many of the key factors causing software projects to fail, it is still worthwhile to adopt Agile. Though there is extensive research conducted around the world in Agile adoption challenges and its usage in software development companies, there is lack of similar studies conducted for non-IT enterprises. We find that there is a significant difference in the way companies whose core business is IT operates to that of other enterprises where IT is an essential building block. There has not been any research conducted in Sri Lanka in this nature. Hence, this research intends to fill that gap.

The conceptual framework has been built based on the findings of N. McKie and D. Elfanbaum in their publication of “The top five reasons software projects fail” [22] and “Challenges of Migrating to Agile Methodologies” of Sridhar Nerur, RadhaKanta Mahapatra, and George Mangalaraj [05]. A questionnaire was built covering all aspects of the framework and distributed among IT and Business Managers who have actively engaged with delivering software development projects in non-IT enterprises.

The results of this study prove that all the challenges faced by non-IT enterprises when adopting Agile to their project management is the same as what Software development companies faced. Further it was revealed that the principles of Agile project management are widely in used among non-IT enterprises without knowing them as “Agile”. Hence, the finding of this research will prove useful in promoting “Agile” project management among the non-IT enterprises and will give an insight to the challenges which they should anticipated in the adoption process.

Key Words: Agile, Project Management, Non-IT Enterprises, Adoption Challenges, Software Project Failure

Acknowledgements

Firstly, I would like to extend my sincere gratitude to my supervisors Dr. Buddhinath Jayatilleke, visiting lecturer of Department of Computer Science and Engineering, University of Moratuwa, for his invaluable advice and guidance.

I also thank Dr. Chandana Gamage, Head of the department, Department of Computer Science and Engineering, University of Moratuwa, and Mrs. Vishaka Nanayakkara, former Head of the department, Department of Computer Science and Engineering, University of Moratuwa, for providing continuous support and advice to carry out the research successfully.

I further extend my deepest gratitude to all academic and non-academic staff of Department of Computer Science & Engineering and library staff of the University of Moratuwa for their support in numerous ways.

 [University of Moratuwa, Sri Lanka](#).
I take this opportunity to thank the Management and Staff of Fonterra Brands Lanka (Private) Ltd for sponsoring the MBA and for the support extended to me in this regard to make it a success.

I sincerely thank all the professionals in non-IT enterprises for extending their support by providing their feedback and assistance to this research exercise. A special thank to my MBA batch mates for all their support extended to me in completing this. A special note to Pradeepa and Dominic for their valuable inputs to made this exercise a reality. Finally thank my wife, and my parents. Without their help and support this endeavor would not have been possible.
